

1.2.1

ISP Coordination

Ric Mason (acting)

Accomplishments

- None - NEW Task

Issues

- Site specific surveillance (SSS) efforts will best support long term storage evaluation if they are coordinated.
- Site ISP efforts must be coordinated.
- Data collected in the SSS efforts, the ISP, the shelf-life tests, and the lead-surveillance tests must be data mined and evaluated.
- Mined data and evaluations must to be reported to the ISP steering committee.

Approach or Activities

- A ISP coordinator needs to be identified.
- The coordinator will visit the sites and help build the bridges needed to get data collected and ISP tasks implemented.
- Data collected (RFETS production data and MIS data) will be evaluated.
- Reports will be drafted and sent to the MIS-WG and then to the ISP steering committee.

Resources

- Staff
 - Coordinator Looking and waiting for FY04 budget issues to be resolved
 - Database – Joe Watt's team
 - Evaluation and reporting.
 - Bill Crooks Carolynn Scherer
 - Kirk Veirs John Berg
 - Jerry Boak
- Equipment
 - None required
- Facilities
 - None required
